

U.S. ROBOTICS U2 MANUFACTURING GROUP, SKOKIE, ILLINOIS

## U.S. ROBOTICS U2 MANUFACTURING GROUP, SKOKIE, ILLINOIS

To create a state-of-the-art manufacturing and office center for the production of computer communications equipment, USR chose to renovate a mundane, 83,000sf, 50-year-old industrial building. Taking advantage of an existing bowstring truss system, the new design divides vaulted interior space into layers of open offices, private offices and the production floor. A visual connection between factory and office workers is established so managers can see both.
