U.S. ROBOTICS USTATE, SKOKIE, ILLINOIS

To house its rapidly growing Personal Systems Division, U.S. Robotics chose to recreate the interior of a vacant 135,000 sf office building. The building housed roughly 40,000 sf of bland, uninterrupted office space. The new design addressed seemingly contradictory objectives. Budget constraints required the reuse of almost everything in the existing space, including lighting, HVAC and existing partitioning, and governed the selection of new materials.
