U.S. ROBOTICS UWEST, MORTON GROVE, ILLINOIS

U.S. Robotics saw the potential for converting an abandoned 300,000 sf manufacturing building built in the 1950's, into a modern, state-of-the-art production and office center. The interior was gutted and redesigned to meet this technology-driven client's highly specialized needs. Due to a roof height of less than 10 feet at the main office areas and entry, the design exaggerates the horizontal dimensions to create a sense of monumentality and fast paced change.
